

Assembly Instructions

If fitting into the ground, dig a hole approximately 42cm diameter by 25cm deep and insert pebble pool.

Place stainless steel tubes into the metal frames in the order shown in diagram.

Using the screws in the side of the metal frame, tighten and adjust, until the stainless steel tube is in a vertical position (a spirit level may help at this stage).

The hose and tap connectors in the base liner should then be connected to the hoses that run inside the steel tubes as shown in diagram.

It will be necessary to adjust the flow of water on the tubes using the tap connectors provided..

Run cable to power point and fill pebble pool with water.

IT IS STRONGLY ADVISED THAT AN RCD IS FITTED TO YOUR POWER SUPPLY

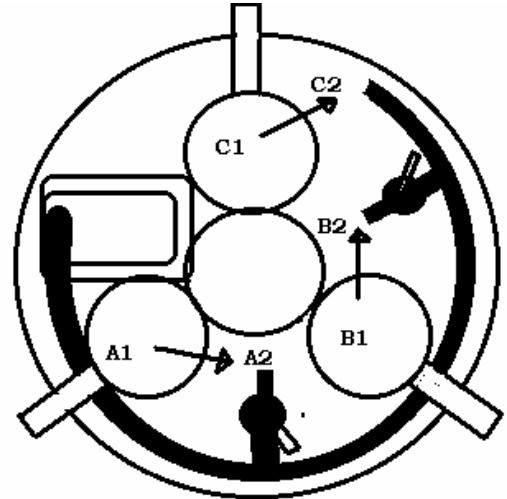

Once tested to see if tubes are level, add base cover over the top of tubes and decorate.

It may help your water if you add a chlorine tablet to breakdown lime scale.

Our water features are designed for outside use, but can be put indoors if required. The pump supplied may give of some noise if used in a confined space

IMPORTANT

If you are not putting your feature into the ground, it must be bolted down.

A1 small stainless column pipe
B1 medium stainless column pipe
C1 large stainless column pipe
